***Claim Objections***

Claims 8 and 9 are objected to under 37 CFR 1.75(c) as being in improper form because a multiple dependent claim cannot depend from any other multiple dependent claim. See MPEP § 608.01(n). Accordingly, the claims have not been further treated on the merits.

***Double Patenting***

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-7 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 1-10 of copending Application No. 09/878,203. Although the conflicting claims are not identical, they are not patentably distinct from each other because both the instant application and application 09/878,203 encompass positive active materials for secondary batteries formed by hydrolyzing an aqueous solution of FeCl<sub>3</sub> and VOSO<sub>4</sub> at a temperature between 40°C and 100°C, where the molar ratio of VOSO<sub>4</sub> to FeCl<sub>3</sub> is between 0.034 and 0.1.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented. Although the conflicting claims have been allowed, a patent has not yet been issued.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

- (a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claim 1 is rejected under 35 U.S.C. 102(a) as being anticipated by Amine et al., "β-FeOOH, a new positive electrode material for lithium secondary batteries", *Journal of Power Sources*, 81-82 (September 2000) 221-223.

Amine et al. disclose β-FeOOH as a cathode material for lithium secondary batteries. A lithium-intercalated form, β-FeOOH<sub>Li<sub>0.91</sub></sub>, is disclosed. ((See page 222, second column, line.) An x-ray diffraction pattern of β-FeOOH is shown in Fig. 1. The half-widths of the diffraction peaks shown appear to be greater than 0.3°.

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Takada et al, US Patent 6,270,925 B1 and Nakamura et al., US Patent 6,083,474 A discloses iron oxyhydroxide positive electrode active materials for secondary batteries.
